System KOMFORT LINE K-3

General product information

The system KOMFORT LINE K-3

The KOMFORT LINE K-3 is a system of window hardware in the product line of AXOR INDUSTRY Company. In order to create it our designers set a goal to invent the hardware which would provide a simple assembly for window producers, ergonomic opening and closing, as well as, safety for users.

The KOMFORT LINE K-3 - first of all it is attention to details, which found its reflection in the quality of hardware system.

Application range

All window furniture in our catalogue is intended exclusively for the internal opening of windows and balcony doors.

The system K3 has been provided in such assemblies as, tilt and turn opening, single turn opening, single tilt opening and double sash opening as well.

Hardware elements

All sets of hardware, which were indicated in this catalogue, must consist only from original elements of AXOR INDUSTRY. Otherwise the producer won't be able to guarantee the work of hardware properly.

So, for each type of a sash, it is possible to set optional elements for additional functionality of one. These elements were marked with following colors:

Red – base safety;

Grey – possible equipment.

Quality

All products of AXOR INDUSTRY corresponds according to technical norms of DSTU 5 B.2.6-39:2008, GOST 30777-2001, GOST 538-2001, EN 13126-8 which regulate the main requirements of tilt and turn hardware.

Assembly

So, for accurate an assembly and for further correct work of hardware it is necessary to follow instructions of this catalogue.

Fixing of details:

The handle with screws M5 x 40mm.

The elements of a sash and the locking plates: self-tapping window chromated screws 4,0 x 25 mm or 3,9 x 26 mm.

The elements of hinges group: galvanized or alternatively chromated screws with flat head and cross-shaped slot, DIN 7982 3,9 x 32 mm or 3,9 x 38 mm.

Preliminary drilling is necessarily for these screws. Perforation instead of drilling is forbidden. Drill diameter for PVC profiles is 0,7, and for steel profiles is 0,8 diameter of a screw.

Settings of electric- or pneumatic screwdriver: maximum torque is 2.5 Nm, rotation speed: max 600 - 1000 rpm.

In case of non-compliance of these catalogue's recommendations for assembly and exploitation, the producer AXOR INDUSTRY cannot guarantee proper work of separate elements, as well as, the work of hardware system in whole.

The AXOR INDUSTRY Company reserves the right, in a process of further an improvement and development, to make technical changes of product KOMFORT LINE K-3, and also to change packaging norms.

Locking pins

General product information

The locking pins of KOMFORT LINE K-3

The system of window hardware KOMFORT LINE K-3 was equipped with cylindrical pins of sliding.

Thus, as additional option it is possible to complement elements of a sash with a mushroom pin, to conform the base safety level according to AhS Standard.

In order to ensure air and water permeability of window and balcony door units in accordance with the GOST 23166 and DSTU B.2.6-39:2008 standards, the construction of turn, tilt and tilt&turn devices shall ensure that the contact between the sash (leaf) and the frame remains tight and even for the entire duration of service life, based on recommendations from the profile system manufacturers, the use of a certain type of gasket and observance of the required size of gap under the gasket (GOST 30777-2012), which means that when assembling a tilt-and-turn (turn) window, the manufacturer must receive recommendations regarding the number of and the distance between the locking points directly from the profile manufacturer, in writing and with the explanation of these requirements.

The adjustment range of locking pins is +/-1 mm. The diameter of pins is 11 mm.

Technical features of Komfort Line K-3

1) All elements of hardware have holders which allow fixing ones in the fitting groove before screwing by screws and to prevent moving along of fitting groove during assembly of a sash.

2) There is an opportunity to fix the finger of the corner bearing at the extreme bottom position under angle 180° in order to make an assembly more comfortable by a screw gun, so the finger is not falling down and hindering to screw the screws.

3) The holes of the corner bearing and stay arm bearing were designed thus all screws to pass through reinforcement profile inside of a frame.

4) The drill-in corner hinge has two pins following sizes: length 5 mm and diameter 3 mm to fix reliably this one before the moment of screwing by screws.

5) There is a plastic bush, of high-strength polymer, Inside of the drill-in corner hinge, which prevents unscrewing of an adjustable screw during the turning of a sash. Thus there is not any creak during of the turning of a sash. The adjustable screw of the drill-in corner hinge was fixed primordially in the central position to exclude unscrewing during transportation and exploitation of end product.

6) The finger of the stay arm bearing gets the hard and reliable fixation thanks to a special bush of high-strength polymer, excluding the disconnection by itself.

7) The antitheft locking plates with mushroom pins of the corner transmission and middle lock together allow equipping a window according to requirements of the base safety according to AhS Standard.

8) The wrong operation safety device with sash lifter is universal for left and right opening. There is a fixation of the central position before a moment of assembly. It can work even the gap between the frame rebate and sash rebate is from 10,5 till 14 mm. Thus, if it is necessary there is an opportunity to adjust a lifting plate at +/- 1 mm by height. So, the setting of the lifting plate with a special telescopic jig provides the correct work this wrong operation safety device whole.

9) The bottom extension has "a ski-lift" which was integrated to this one, thus it excludes the sagging down of a sash when it is closed.

10) The junction of the middle lock to the stay arm is quite reliably thanks to a screw, which joins these ones.

11) The adjustment range of the stay arm by a gasket pressing is +/- 1 mm.

12) There are four types of middle locks thus, it is quite useful for an optimization of a warehouse and for logistics too.

Protective plating of KOMFORT LINE K-3

General product
information

The protective plating of KOMFORT LINE K-3

The quality of the plating of all hardware's elements affects at the work of accessories, durability and surface appearance very much.

Thus, the special technology of galvanizing allows getting the high-quality plating, which provides all elements of KOMFORT LINE K-3 required level of protect against corrosion.

Nevertheless, a silver color of the hardware's surface appearance fulfills a decorative function to allow it to combine successfully with the others elements of a window.

The causes to appear the corrosion at hardware's surface.

- 1) The prolonged exposure of high wetness (more than 70%).
- 2) The polluted air with gas, comprising a connection of various acids, and an exposure of salt-mist.
- 3) The mechanical damages of surface during an assembly or maintenance, which disrupt wholeness of the plating.
- 4) Some cleaning agents include alkali, acid and so on.
- 5) Under the influence of different temperature there can appear the formation of condensate at the surface of hardware.
- 6) The pollution with some building materials, in particular by cement or gypsum plaster.

Some instructions to keep the quality of surface plating

- 1) Avoid hits of building materials at the hardware surface, for example plaster, cement, different building solutes and building dust.
- 2) Avoid any exposure of aggressive acidic steam and salt-mists at the hardware surface.
- 3) Do not use any rubber gasket, which is able to soak up and to hold some moisture.
- 4) The cleaning should be made with pH-neutral solute, before diluted.
- 5) Do not permit any mechanical damages of the hardware's surface by building, assembly and detergent instruments.

Storage conditions

This applies to storage and transport, as well as for unloading and loading procedures. Where appropriate, plastic protective sheets or similar are to be used during outdoor transport when raining (i.e. on-site transport). Storage may only be carried out in suitable, closed rooms and not outdoors. Condensation is to be absolutely avoided during the entire transport and storage duration.

- 1) Always keep the hardware boxes closed, and always cover up hardware boxes which were opened and do not put boxes directly on the floor.
- 2) Transport the hardware always with suitable devices (if possible on pallets with stretch film).
- 3) The components may not get wet. The packaging must remain dry (it is recommended: Warehouse temperature – 15-25°C; Relative humidity – less than 50%).
- 4) If box becomes wet please immediately unpack the components from the wet bundles, dry the components and check for signs of corrosion. In any case repack the usable components when dry with new packing material.

Representation of the information

All article numbers in this catalogue were afforded an alphanumeric form. The decipher of all article numbers you can find at the pages 8-9.

Thus, all sizes which were shown in that catalogue are nominal and contain general tolerances.

All sizes were conferred in mm.

The information about restriction of sashes' sizes should be taken from diagrams of this catalogue or a user's guide.

Section of PVC profiles for single sash and double one

General product
information

The single sash constructions

Sash rebate gap (A): min. 12 mm

Sash overlap (C): 18 – 22 mm

Sash groove position (B): 9 mm

Sash rebate gap (A): min. 12 mm

Sash overlap (C): 18 – 22 mm

Sash groove position (B): 13 mm

The double sash constructions with opposite hardware groove

Sash rebate gap (A): min. 12 mm

Sash overlap (C): 18 – 22 mm

Sash groove position (B): 9 mm

The handling of a passive sash with double sash's gears K1002-XX-N03

Sash rebate gap (A): min. 12 mm

Sash overlap (C): 18 – 22 mm

Sash groove position (B): 13 mm

The handling of a passive sash with double sash's gears K1002-XX-N03

The information about profile-depending elements you find at the profile list

Recommendations for profile design - PVCu windows

General product
information

1. The tolerance of width for top sash's hinge.
2. Necessary distance for moving the hardware.
3. Gap for hinge.
4. Sash overlap.
5. Necessary distance for the clamping of gasket adjustment.
6. Necessary distance for inserting a hinge into sash overlap.
7. Necessary distance for operation of small turn and tilt-turn sashes.

Dimensions for plastic profile according RAL as of February 1998.

Narrow corner transmission

Corner transmissions
Middle locks

Narrow corner transmission, 50x150

Narrow corner transmission, 50x150, 1ML

- not intended for double-sash windows;
- not intended for RC security level.

In order to use the narrow corner transmission according to scheme B the distance from the bottom of the fitting groove to the handle axis should be 225 mm, i.e. a hole for handle on gear K1001-02-N03 is displaced from the center of the sash in application range of the sash's height 370-450 mm.

Description	Side opening	Application range		SRW (mm)	SRH (mm)	1	—	3	50	Part No.
Narrow corner transmission, 50x150	A	300-400	450-2390	1	—	3	50	K2003-00-N03

Locking plate, integrated slit

Additional elements

Locking plate, integrated slit

- intended for PVC-windows only;
- use with standard and narrow corner transmissions;
- independent from type of opening (left or right);
- creates a 7-mm gap for ventilation;
- recommended for using with 8-position handle.

Installation recommendations Adjustment

Section 7

Installation Tools

Sash installation

The pin should be installed only when the sash has been closed and the handle is in "Tilt" position.

Caution!

After the pin has been installed to rotate the handle to "Closed" position.

Pin installation

1. Insert the pin into appropriate hole by hand.
2. Push the pin into final position with mounting handle.

Sash removing

The pin should be removed only when the window has been closed and the handle is in "Tilted" position. Then, after the pin has been removed to turn the handle to "Open" position and to remove the sash.

Stay arm

Drill-in corner hinge

Turn stay arm

Adjustment

Installation
Tools

Locking pin	CP	Rotation direction	Adjustment limits	Locking pin	MP	Rotation direction	Adjustment limits
		(○)				(○)	
		(○) 90° 90°	± 1			(○) 90° 90°	± 1

Installation recommendations

For hinge installation it is recommended to drill 3-mm hole in plastic and reinforcement profile, then to screw the hinge with screws without drill-bit.

The straight cut and the connection with a special slider

Punching machines

Punching machines

BS - Multi - Max® PS 100

- Integrated blow out function
- Straight cuts
- Punching Force at 6bar 15 kN
- Working Pressure min 6-8 bar
- Working Pressure max. 8 bar
- Foot switch
- Designed for small up to medium size production

BS - Multi - Max® BeSt40

- Hydropneumatic drive
- Straight cut
- Working Pressure 6-8 bar
- Punching Force at 6,75 bar 40 kN
- Max. punching force.....60 kN
- Max. pressure.....8 bar
- Foot control
