

## WINDOW HARDWARE WHICH CHOSEN BY PROFESSIONALS

**AXOR SMART QUICK** – is a perfectly balanced set of hardware, containing all necessary solutions that a true professional would choose. Every element is thought out to the smallest details to ensure durability, safety and ease of use.

Even in the basic set you get:

- Separating **stay arm with micro-slot ventilation** – for comfortable microclimate at any time of the year.
- Wrong operation safety device with **micro-lift** – for smooth and flawless window operation.
- **Burglary-resistant cams** – for an increased level of protection.
- **Telescopic locking plate** and **additional clamp** in the top sash hinge area for better tightness.
- **Sash lifter** – for easy use without unnecessary effort.

All elements of a window sash are connected with an **eccentric cut**, which ensures maximum strength and reliability.

AXOR SMART QUICKQUICK is not just window hardware, but the standard trusted by professionals. Choose the best for your business and customers!

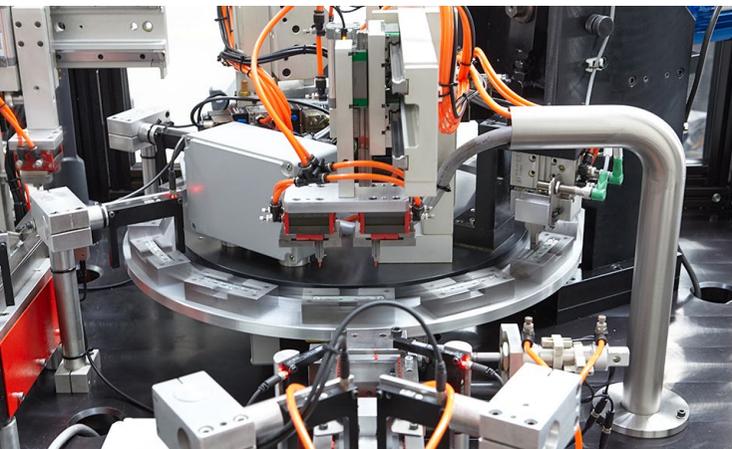

**AXOR INDUSTRY** – A fast-growing international company that went a long way from a distributor of hardware for PVC windows to a world-known manufacturer.

All production processes at the plant are fully automated, organized with environmental safety requirements and EN and DIN standards, and have been certified by IFT Rosenheim (Germany), the industry's leading institute. Quality control is implemented at all production stages, and includes product testing at our own certified laboratory.

Thanks to productive cooperation with window manufacturers, AXOR INDUSTRY creates high-quality products, thereby making a significant contribution to the development of the window market

The quality of AXOR hardware is confirmed not only by certificates, but also by such prestigious awards as Consumer Choice 2023 and Quality Mark 2024, as well as by positive customer feedback.

Therefore, if you value quality and comfort, your choice is AXOR hardware.

# SMART QUICK **SQ**

## CHOICE OF PROFESSIONALS

### TELESCOPIC PLATE

**Automatic position adjustment.** The telescopic design automatically adapts to changes in the window geometry that may occur due to temperature changes. This ensures stable operation of the fittings without the need for frequent adjustments.

### WRONG OPERATION SAFETY DEVICE WITH MICRO-LIFT

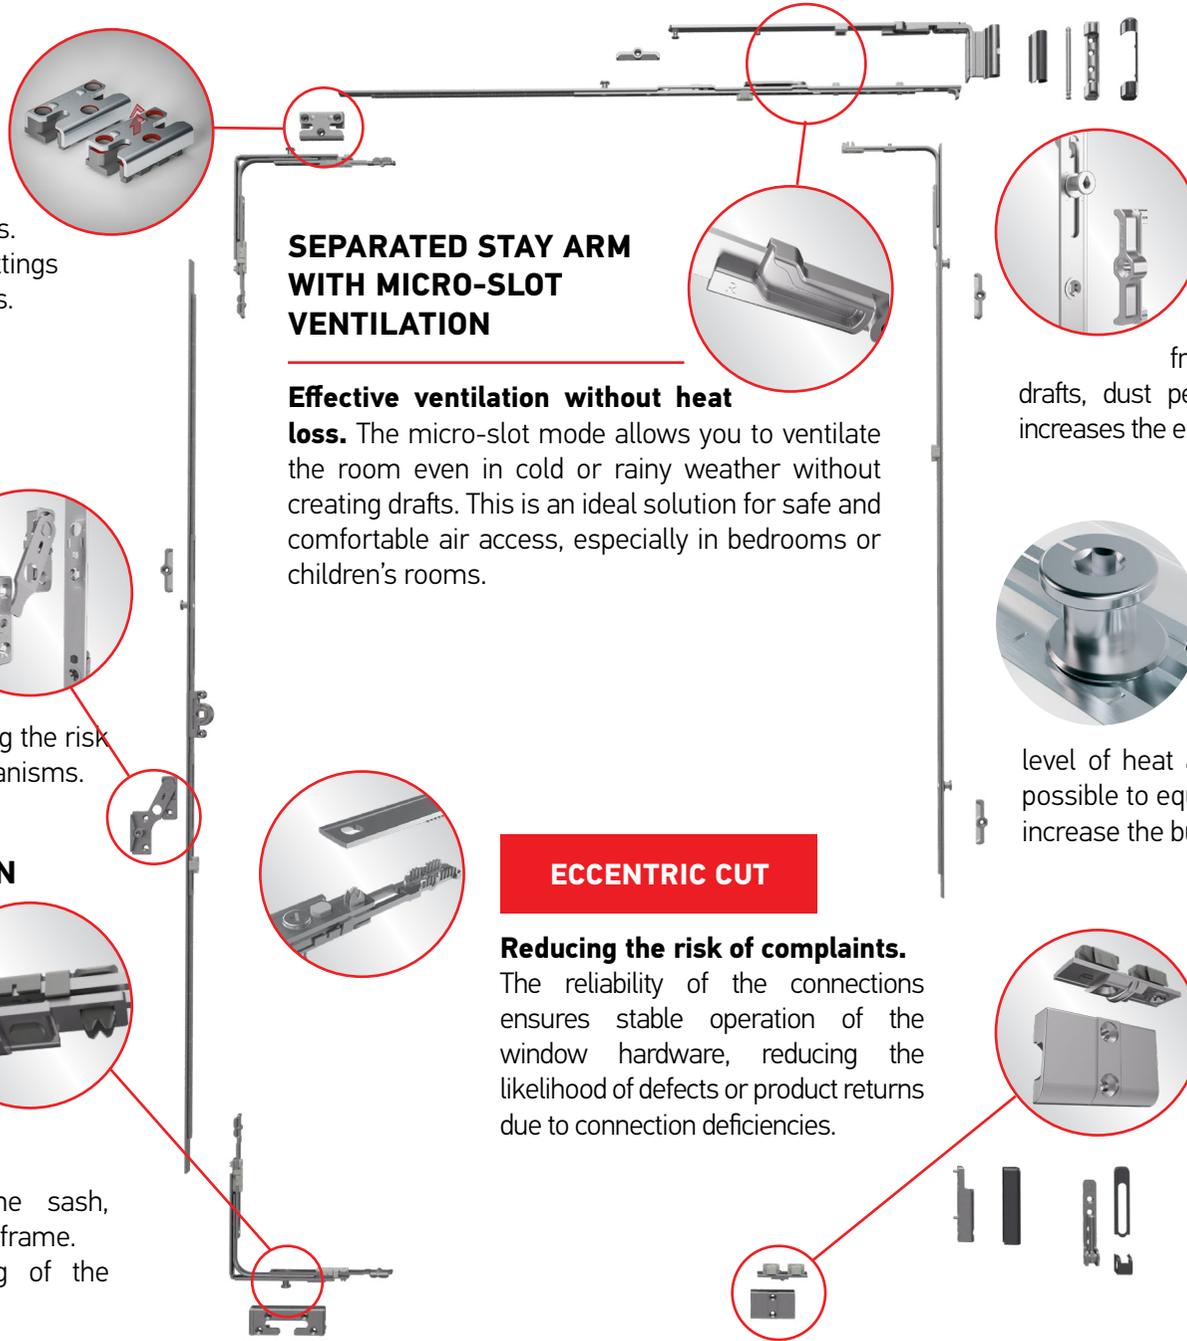

■ **Protection against sash sagging.** Ensures smooth operation of the window even with large and heavy sashes, extending the service life of the structure.

■ **Prevention of breakage.** The wrong operation safety device protects the fittings from misuse, reducing the risk of damage and malfunctions in the mechanisms.

### BOTTOM CORNER TRANSMISSION WITH A SASH LIFTER

■ **Ease of use.** The sash lifter automatically lifts it to the correct position, which avoids friction or jamming..

■ **Protection against sash sagging.** The built-in mechanism supports the sash, distributing the load on the hardware and frame. This prevents deformation or sagging of the structure and extends its service life.

### SEPARATED STAY ARM WITH MICRO-SLOT VENTILATION

**Effective ventilation without heat loss.** The micro-slot mode allows you to ventilate the room even in cold or rainy weather without creating drafts. This is an ideal solution for safe and comfortable air access, especially in bedrooms or children's rooms.

### ECCENTRIC CUT

**Reducing the risk of complaints.** The reliability of the connections ensures stable operation of the window hardware, reducing the likelihood of defects or product returns due to connection deficiencies.

### ADDITIONAL GASKET PRESSURE IN THE TOP SASH HINGE AREA

**Improved tightness.** An additional locking plate in the top sash hinge area ensures uniform gasket pressure of a sash against a frame. This minimizes the possibility of drafts, dust penetration, noise and heat loss, which increases the energy efficiency of the window.

### BURGLARY-RESISTANT LOCKING CAMS

**All elements are exclusively with burglary-resistant locking cams.** This creates additional pressure on the gasket, which guarantees high level of heat and sound insulation. It also makes it possible to equip a window to RC 3 security class and increase the burglary resistance of the structure.

### THE SASH LIFTER IN THE BOTTOM HINGE AREA

**Smooth operation of the hardware.** There ensures easy opening and closing of a window by reducing the load on the hinges and other window hardware elements.
